

Fork Positioner for Forklifts

Forklift Fork Positioner - The fork positioner is actually a hydraulic device which can allow the person driving to work the forklift without leaving the seat. They are constructed out of top quality materials and are intended to be able to endure the most demanding procedures and work surroundings. Side shifting units have the extra ability to laterally position the arms or the entire load in order to facilitate more accurate lifting and placement in a faster and more effective method.

The blade pocket is quite unique and could enable the person operating it to be able to safely sway the forks into position without any fear of damaging the positioning cylinders. This can allow the driver the alternative to execute simultaneous or independent fork movement, dependent upon the job requirement. For most lift trucks with non-OEM carriages, complete carriages are required. Standard OEM carriages could be transformed into blade positioners on available units.
